# MONOGRAM AEROSPACE FASTENERS

## 1.0 SCOPE:

This specification outlines the installation and inspection requirements considered necessary to insure the proper performance of Composi-Lok<sup>®</sup> 3 Blind Fasteners. The installation tooling recommendations given herein are not applicable to fasteners which have an "A": suffix (automatic installation) after the grip dash number (e.g. MBF 2312-06-250A). Consult factory for details on "A": coded parts.

## 2.0 DESCRIPTION:

The Composi-Lok<sup>®</sup> 3 is a five-piece (5) blind fastener consisting of a threaded nut and screw, an expandable sleeve, an acetal insert and a disposable drive-nut. Composi-Lok<sup>®</sup> 3 is designed to eliminate secondary shaving operations by providing a flush break-off. It is available in a variety of head styles in 5/32" and 3/16" diameters with 1/4" through 3/8" to be developed as required. Refer to the "MBF" series product drawings for available sizes and types.

## 3.0 EQUIPMENT:

- 3.1 In order to insure the best results, only approved pneumatic and/or hand installation tools should be used. The current list of approved tools is noted in Figures 1 through 7 for the information of the user. These tools are available from:

Monogram Aerospace Fasteners  
3423 South Garfield Avenue  
Los Angeles, CA 90040

- 3.2 Removal tooling, developed specifically for Composi-Lok fasteners, is shown in Figure 9. Complete removal kits are also available. Contact Monogram Aerospace Fasteners at the above address.

## 4.0 GENERAL INFORMATION:

- 4.1 These fasteners must be used within the grip range limits specified by the manufacturer in order to insure proper performance. In the event that a borderline grip condition exists, it is recommended that the maximum grip condition be favored, (i.e. a 0.250 reading uses a -250 grip part). This practice will help assure optimum performance in the event not all sheet gap has been removed.
- 4.2 The blind sleeve may be driven against a 7° maximum sloping surface (see Figure 13 and Par. 6.2).
- 4.3 It is required that only the approved tools listed in Paragraph 3 of this specification be used for the installation of these fasteners.
- 4.4 Composi-Lok<sup>®</sup>3 should not be used in cocked hole applications, (see Paragraph 5.1.1).

(1)Used on Composi-Lok™ fasteners only.

(2)This kit is used to remove alloy steel, titanium and A-286 Visu-Loks® or A-286 and titanium Composi-Lok™ fasteners. To remove H-11 and similar material, contact factory for details.

(3)Corebolt protrusion should be milled flush prior to removal.

(4)A complete tool consists of the air motor module (#RM3197), a nose piece module (see Chart) and a carbide star drill (RM3116-( )) and a depth gage for setting drilling depth.

(5)Use flush head style nose piece modules for non-hexagonal protruding head fasteners (e.g. MBF2010 and MBF2120).

(6)One blank receptacle #RC3076 should also be ordered for use with the depth to facilitate set up.

## MONOGRAM AEROSPACE FASTENERS

- 4.5 Composi-Lok<sup>®</sup> 3 are supplied to the user with proper lubrication to insure satisfactory driving characteristics. This lubricant should not be removed or any additional lubricant added.
- 4.6 If a fastener has been removed, the same diameter Composi-Lok<sup>®</sup> 3 can be reinstalled provided the hole has not been damaged. In the event that the hole has been damaged, the next larger diameter Composi-Lok<sup>®</sup> 3 should be used. (Note: for flush head fasteners the countersink will have to be deepened).
- 4.7 Use of the fastener in special applications necessitating the use of sealants, paints, primers, etc. should be thoroughly investigated by the user prior to installation.

### 5.0 DETAIL REQUIREMENTS

#### 5.1 Hole and Sheet Preparation:

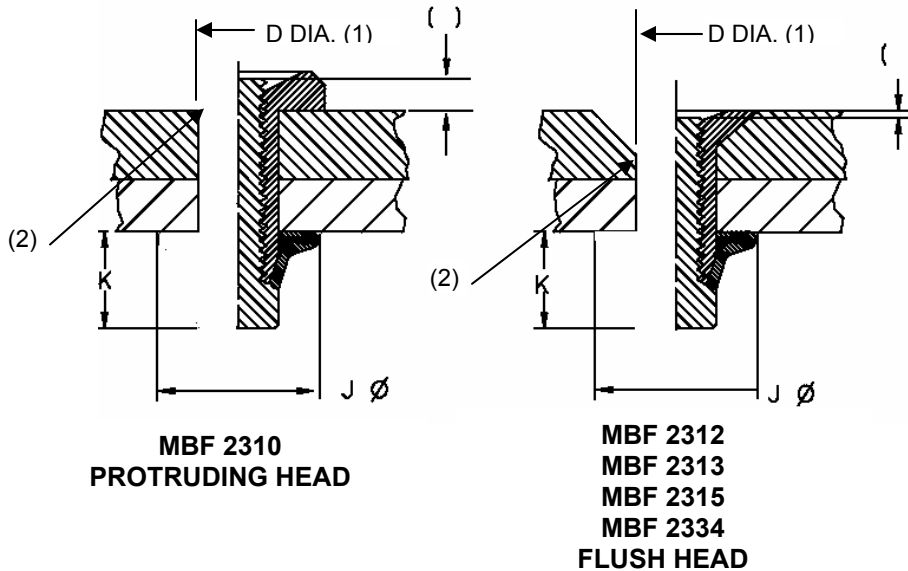

- 5.1.1 Holes shall be drilled straight and perpendicular (within 1 ½°) to the surface against which the manufactured head will bear. The hole shall be reasonably round and free from burrs (metallic structure) and delamination (graphite/epoxy type structure).

The edge of fastener installation holes for both protruding and flush head style Composi-Lok<sup>®</sup> 3 should be given a light chamfer on the head side as a radius relief to insure proper seating of the bearing surfaces. Chamfer should be equivalent in size to 50% of the maximum head to shank fillet radius specified on product drawings.

- 5.1.2 The sheets to be joined should be firmly clamped up or otherwise fixtured to prevent hole misalignment.
- 5.1.3 The recommended hole sizes and countersink diameter for the various type Composi-Lok<sup>®</sup> 3 are shown in Table IX. The countersink diameters shown may be adjusted to suit a specific manufacturer's flushness requirements, as desired.

**FIGURE 11  
FASTENER HOLE PREPARATION & INSTALLED DIMENSIONS**

**TABLE 11**

DIA. DASH NO.	D DIA RECOMMENDED HOLE SIZE	FLUSH HEAD CSK P DIA.	J DIA. MIN.	K MAX.	N (3) COREBOLT BREAK-OFF LIMITS
-5	.165 - .168	.325 - .332	.250	.370	+ .000 - .030
-6	.199 - .202	.378 - .385	.300	.420	
-7	.228 - .231	.409 - .416	.350	.490	T.B.D.
-8	.260 - .263	.499 - .507	.400	.510	
-9	.290 - .293	.530 - .538	.450	.535	
-10	.312 - .315	.626 - .635	.475	.540	
-11	.344 - .347	.657 - .666	.525	.670	
-12	.375 - .378	.752 - .762	.565	.675	

- (1) Holes should be straight and perpendicular to surface. Holes should be reasonably round and free from delamination.
- (2) Edge of holes should be given a slight chamfer.
- (3) Corebolt break-off limits are measured from the head of the fastener. Break-off limits per applicable standards page.

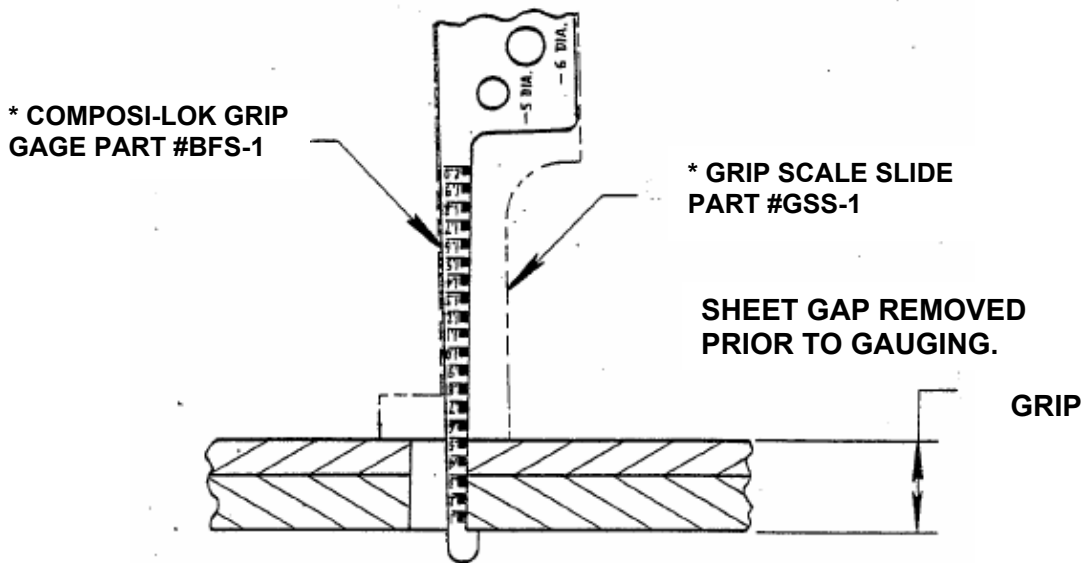

Sheets should be firmly clamped together during drilling.

6.0 SELECTION OF GRIP LENGTH:

6.1 Prior to installation, the grip length should be checked with a grip gauge (see Figure 12). Refer to product drawings for available grip ranges. All sheet gap should be removed prior to gauging for proper grip.

FIGURE 12  
GRIP GAUGE

\* COMPOSI-LOK GRIP GAGE AND GRIP SCALE SLIDE AVAILABLE AS AN ASSEMBLY – PART #BFS-1A

6.2 In those applications where a tapered sheet condition exists on the blind side, the grip length must be determined by the depth at the centerline of the hole. In no case should this taper exceed 7°, in order to insure proper performance of the fastener. (Refer to Figure 13).

FIGURE 13  
TAPERED SHEET CONDITION

# MONOGRAM AEROSPACE FASTENERS

- 6.3 In those applications where the grip is a borderline condition, it is recommended that a maximum grip condition be favored, (i.e. a 0.250 reading uses a -250 grip part). This practice will help to assure optimum performance.

Note: The minimum grip for a flush-type shall in no case ever be less than the head height (see Figure 14).

**FIGURE 14  
FLUSH HEAD HEIGHT**

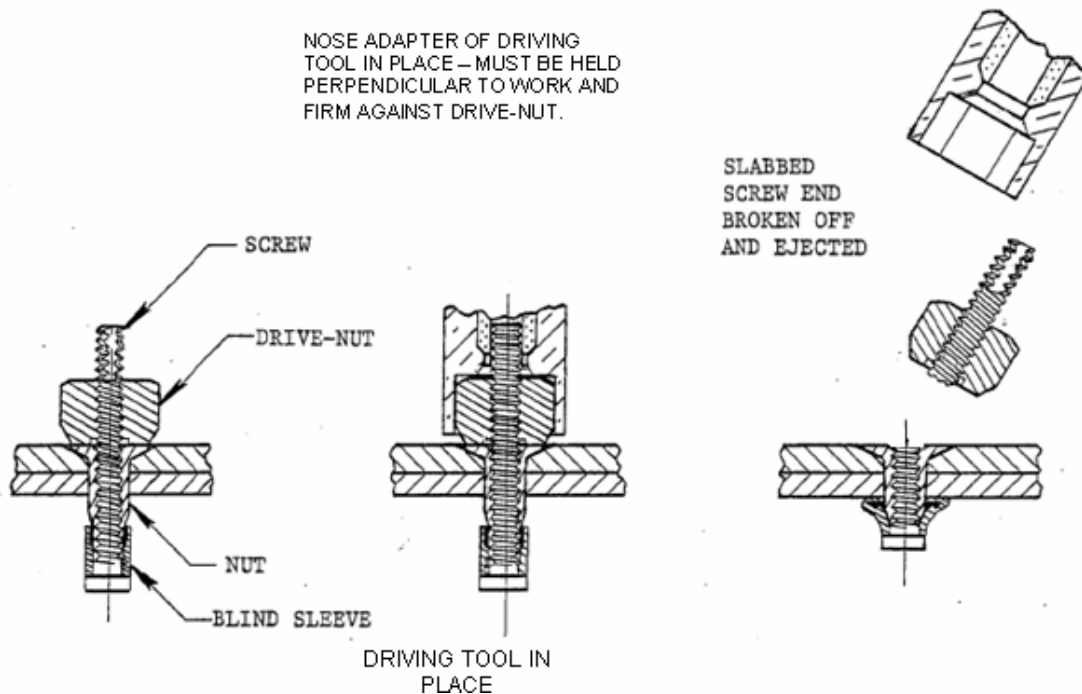

## 7.0 DRIVING PROCEDURE:

- 7.1 Composi-Lok<sup>®</sup> 3 are driven with special tools and equipment designed specifically for this job. The correct tools and equipment are listed in Paragraph 3 of this specification.
- 7.2 Insert the fastener in the hole. The Composi-Lok<sup>®</sup> 3 can be inserted in a properly prepared hole without interference.
- 7.3 The wrenching part of the adapter assembly is inserted over the slabbed portion of the screw and the nose piece engages the drive nut. The driving tool must be held firmly against the head of the fastener and perpendicular to it. Cocking of the driver may cause premature stem break-off before the fastener is completely driven.
- 7.4 The driving force is then applied by the pneumatic power tool or by a hand driving tool. As power is applied, the screw is turned as the nut is held stationary by the drive-nut which in turn is held stationary by the nose piece. The sleeve is compressed between the screw head and the conical end of the nut and is drawn over the tapered nose portion of the nut. The sleeve is thereby expanded subsequently forming a head against the mating surface being joined. As driving is completed, the slabbed portion of the screw is snapped off and ejected along with the drive-nut (see Figure 15). The resultant break-off should be within the limits specified on the product drawings.
- 7.5 In those instances where special driving tools are adopted by the user, wrenching speed of this tooling shall not exceed 600 RPM.

**FIGURE 15**  
**DESCRIPTION OF INSTALLATION**

### 8.0 REMOVAL OF COMPOSI-LOK<sup>®</sup> 3:

Compositi-Lok<sup>®</sup> 3 may be removed with the tooling shown in Figure 9 of this specification. Complete kits are available from Monogram Aerospace Fasteners. Contact factory for details.

### 9.0 INSPECTION AFTER INSTALLATION:

- 9.1 Compositi-Lok<sup>®</sup> 3 is designed to provide a flush break throughout the fastener's grip accommodation. For this reason the stem break-off position of the screw in the head of the nut is **NOT** an indicator that the fastener has been properly installed. Product drawings list the stem break-off limits for installed fasteners
- 9.2 If desired, clamp-up may be determined indirectly by seating torque. Adapt the applicable torque adaptor (Table 12) to a suitable torque wrench, engage the recess in the fastener head and apply the minimum seating torque. The ability of the fastener to resist rotation when subjected to the torque values in Table 12 is a good indication that the required preload has been imparted to the joint. To prevent damage to the joint, care should be taken not to exceed the seating torque.

# MONOGRAM AEROSPACE FASTENERS
